Anti-Human EIF4EBP1 Antibody [K70031_7C11]

Catalog No. K70031M07C11C

Overview

Product name: Anti-Human EIF4EBP1 Antibody [K70031_7C11]
Antibody specificity: Eukaryotic translation initiation factor 4E binding protein 1 (4E-BP1)
Species reactivity: Human
Clonality: Monoclonal
Clone number: K70031_7C11
Host / isotype: Mouse / IgG1
Immunogen: Recombinant human EIF4EBP1
Cross reactivity: Not tested
Kinetic characterization by BLI (biolayer interferometry): Not tested
Purification: Protein A purified from cell culture supernatants
Form: Liquid
Concentration: 1 mg/mL in phosphate buffered saline containing 0.09% preservative
Conjugation: Unconjugated

Shipping, storage and shelf life: * 3 months when stored at 2 to 8 °C
* 1 year when aliquoted and stored at -20 °C
* 3 years when aliquoted and stored at -80 °C

Note:
* The applications above have already been verified. The antibody may be suitable for additional applications.
* Optimal antibody concentrations for each application should be determined by the user.

Additional information

Target antigen

| Protein name: Eukaryotic translation initiation factor 4E binding protein 1
| Gene name: EIF4EBP1
| UniProt Accession: Q13541
| Organism: Homo sapiens (Human) |
**Immunohistochemistry**

IHC-P analysis of human pancreas tissue by anti-human EIF4EBP1 antibody (K70031_7C11).

IHC-P was performed using sections of the formalin-fixed paraffin-embedded human pancreas tissue. Antigen was retrieved through addition of boiling Tris/EDTA buffer pH 9 in a pressure cooker for 3 min. Endogenous peroxidase activity was quenched by incubating the sections with 3% H₂O₂ for 30 min at room temperature. The sections were then incubated with anti-human EIF4EBP1 primary antibody (K70031_7C11) at 5 μg/mL at room temperature for 1 h. Poly-peroxidase conjugated goat anti-mouse IgG was used as the secondary antibody. Diaminobenzidine was used as the chromogen. The section was counterstained with hematoxylin. A tissue section incubated with phosphate-buffered saline followed by incubation with the secondary antibody was used as the background control.

Result: Exocrine glandular cells are positively stained at the cytoplasm and nuclei.
